## TROUBLE SWALLOWING? IT'S TIME TO LEARN IF IT COULD BE EoE

**Eosinophilic esophagitis (EoE) is a chronic, progressive condition caused by inflammation and narrowing of the esophagus (the muscular tube that connects your throat to your stomach).**

It may cause symptoms including difficulty swallowing (dysphagia), food getting stuck in the throat (impaction), chest pain, heartburn, and vomiting.

Normal esophagus

Inflammation in your esophagus can lead to swelling and narrowing

If inflammation continues untreated, the esophagus will scar and become more narrow

## THINK IT COULD BE EoE? TAKE A LOOK AT YOUR SYMPTOMS

Answering these questions about your symptoms and how you manage them can help you start a productive conversation about EoE with your doctor.

**Have you had trouble swallowing food recently?**

☐ Yes

☐ No

**If you've had trouble swallowing food in the past week, how many times did it occur?**

☐ 1

☐ 2 to 6

☐ 7 or more

**Do you feel your symptoms have impacted your day-to-day life, especially when it comes to eating?**

☐ Yes

☐ No

**Do you avoid eating in social settings?**

☐ Yes

☐ No

**How do you try to manage your symptoms?**

Check all that apply.

☐ Cut food into small pieces

☐ Chew for a long time

☐ Eat slowly

☐ Avoid hard, sticky, or dense foods

☐ Drink liquid when swallowing food

☐ Put food into a blender to make it easier to swallow

☐ Avoid certain food categories (e.g., dairy, wheat, egg, soy)

☐ Eat before going to events where food will be served

☐ Avoid medications that come in pill or tablet form

☐ Other: \_\_\_\_\_

**Do you take any over the counter medications for your symptoms, such as antacids, proton pump inhibitors (PPI) like Prilosec, or H2 blockers such as Pepcid, Zantac, or Tagamet?**

☐ Antacids

☐ Proton pump inhibitors (PPI)

☐ H2 blockers

☐ Other: \_\_\_\_\_

If you answered "yes" to any of these questions or checked more than one symptom, you may have EoE. **Turn over to learn more →**

# DID YOU KNOW EoE IS OFTEN MISDIAGNOSED?

It's true. And because eosinophilic esophagitis (EoE) can worsen over time and permanently damage the esophagus, it's important to learn the signs and symptoms.

To help monitor your symptoms over time, use [this tracker](#) by visiting [ThisIsEoE.com](#) or scanning the QR code with your mobile device.

# COULD MY SYMPTOMS BE CAUSED BY EoE?

Signs and symptoms of EoE vary over time and can differ depending on age.

- Infants and toddlers might refuse foods and lose weight, vomit, or develop malnutrition
- Children may have trouble swallowing, may vomit, or experience abdominal pain
- Teens and adults may have more difficulty swallowing as the esophagus narrows, causing impaction
- Symptoms may be triggered by foods and/or inhaled allergens

## TALK WITH YOUR DOCTOR

If you think you may be living with EoE, please visit an EoE specialist such as a gastroenterologist, allergist, or ear, nose, and throat doctor (ENT). Bring this form with you, discuss your answers with the doctor, and take notes on anything you'd like to follow-up on as you talk through your next steps together.

What tests or procedures can confirm if I have EoE?

If I'm diagnosed with EoE, what can help with my symptoms?

What are some things (eg, foods, allergens) that may make my symptoms worse?

Other items/questions I want to discuss:

Visit [ThisIsEoE.com](#) for more information about EoE and for resources to assist your treatment journey.
